Internship
co-op opportunities

Summer or part-time
employment

Full-time career paths
& Trainee programs

Benefits

Anchor Shoring

is committed to superior service on foundation and soil retention solutions for projects that service the commercial, industrial, residential, institutional and infrastructure sectors (e.g. Subway tunnels, universities, condominiums, sports stadiums, hospitals, airports, etc.)

During my co-op terms at Anchor I worked under an experienced team that constantly encouraged me to take on new challenges and responsibilities as I progressed through the term. My time at Anchor was an extremely valuable experience that has led me to pursue a career within the company upon graduation.

Ray, University of Waterloo

When I first came to Anchor I was a 21 year old 3rd year engineering student and had previously worked at several jobs while in High School and University. I was originally attracted to Anchor because I was looking to gain knowledge in the construction field and had seen Anchor's equipment on projects all over the GTA. During my first summer I gained an invaluable amount of experience working both in the office and out in the field. Anchor is unique in the fact that being a design build firm they can offer positions that are unparalleled, giving students the opportunity to work in a variety of roles including estimating, project management, field supervision, and design. Now at age 27, I've worked with Anchor full time for over 5 years as an estimator and project manager. To this day I still look back and reflect on the knowledge that I gained in my first summer.

Tom, Lakehead University

During my summers working at Anchor I worked both on site supervising and in the office doing estimating and project management. I really enjoyed doing meaningful work and being able to learn new and interesting things during each of my work terms. Anchor provided me with a work environment where questions and independent thinking were strongly encouraged and very rewarding.

Gordon, University of Toronto

Be part of a team of engineers using innovation and creativity to design and construct major structures!

Working at Anchor has been an excellent experience. It has provided me with valuable knowledge I could only learn while working in the engineering field. This includes working closely with supervisors on site and along side project managers in the office. My managers have given me the ability to use my judgment when making decisions providing me with the opportunity to use my education. Working on a variety of jobs at Anchor Shoring has also provided me with experience in many areas of the field enabling me to make an educated decision regarding my career path.

Blake, Dalhousie University

Anchor has completed OVER 4,000 PROJECTS

The first time I came across The Anchor Shoring Group was while witnessing their undertaking of an intricate pile driving procedure in downtown Toronto. What drew me to engage in a summer work term with Anchor was the range, complexity and sheer number of projects they had completed.

During my term I was continually challenged with meaningful work in design, estimation and project management. I appreciated the all-round encouragement from the senior engineers to take initiative and their openness to questions and new ideas. What made this entire learning experience all the more enjoyable was the incredibly positive work environment I found myself immersed in every day.

Levana, University of Toronto

Work on some of the most challenging projects in the country!
